Austin J Keener Graphic Designer and Web Developer

Marietta, Georgia 30339 **Phone:** 404-660-8629 | **Email:** austingraphicandweb@gmail.com **LinkedIn:** www.linkedin.com/in/austin-keener | **Github:** https://github.com/austingraphicandweb | **Portfolio:** https://austingraphicandweb.github.io/mobile-responsive-portfolio/

As a hardworking, adaptive, understanding, and thorough creative I have roughly ten years of experience helping others in the customer service industry. I currently work as a freelance Graphic Designer and Web Developer. I chose to expand my knowledge by attending the Georgia Tech Coding Bootcamp in 2020. I have a professional degree in Graphic and Web Design which has made me proficient in Adobe illustrator, inDesign, and Photoshop. I also have experience with HTML, CSS, javascript, and jQuery. I like to adapt to my work environment by tailoring each customer's experience to be unique which means that I incorporate a single visual voice using color, type, and imagery, throughout each composition that I create.

Technical Skills Languages: HTML, CSS, jQuery, Javascript

Additional Experience

Delivery Driver, 2019 - 2019 Postmates, Atlanta, Ga *While using my communication, organization, and local knowledge I successfully made over 350 deliveries throughout Atlanta and the surrounding metropolitan areas to customers who ordered food through the postmates food delivery application.*

Service Valet and Car Wash, 2018 Nalley Infiniti, Marietta, Ga *Throughout 2018 I helped navigate clients through the vehicle service process and also prepared their cars for pickup in the car wash. I escorted customers to their desired locations during their service times and helped the service team get a 6% overall sales increase over an interval of a few months.*

Intake Specialist, 2012 - 2016 The Keener Law Firm, Marietta, Ga *Assisted with the online marketing and public relations department to help design marketing brochures. Also compiled data from potential and current clients to expand the company customer database.*

Valet, 2012 - 2016 Ameripark, Atlanta, Ga *Organized and parked cars at restaurants and events. Ensured parking security.*

Sales, 2010 - 2011 Your Serve Tennis, Atlanta, Ga *Worked on the sals floor stringing racquets, and helping customers with product recommendations and checking out at the cash register using POS.*

Development Projects

DINMO | https://github.com/Chayvw/gt-gp1-dinmo | *https://chayvw.github.io/gt-gp1-dinmo/*

- A project that allows the user to find custom dinner and movie choices based off of their input.
- Contributed javascript code through the form of code such as AJAX and user input iteration.
- Tools/languages used: JavaScript/jQuery/AJAX.

Memory Maker | https://github.com/austingraphicandweb/Memory-Maker | http://memory-maker.herokuapp.com/

- Description: Memory Maker is a program that is designed to help store and share your favorite memories.
- Tools/languages used: Memory Maker is a full-stack web application created with the MVC paradigm. Memory Maker uses node.js with an express.js server, a mySQL database, a sequelize ORM, and handlebars.js as a view engine. The app features an interactive UI and responsive design.

Note Taking Application | https://github.com/austingraphicandweb/note-taking-application | *https://cryptic-sea-11427.herokuapp.com/*

- This application allows the user to take notes, save them to the web page for future reference, and delete the notes when desired.
- Tools/languages used: JavaScript/jQuery/Express.js

README Generator | https://github.com/austingraphicandweb/readme-generator

- This readme is for an application that allows the user to generate a readme within the terminal for their end product. While one option for creating a readme is on the front end, there is also the option to make one on the back end without it showing up outside of the command line.
- Tools/languages used: JavaScript/jQuery/Inquirer

Employee Title Application | https://github.com/austingraphicandweb/employee-title-application

- This application displays the employees positions within a company on a webpage.
- Tools/languages used: JavaScript/jQuery/FS/Inquirer/Jest.

Password Generation Program | https://github.com/austingraphicandweb/password-generation-program | *https://austingraphicandweb.github.io/password-generation-program/*

- A program that allows the user to generate a random password of any length up to 128 characters that consists of uppercase letters, lowercase letters, numbers, and special characters.
- Add programming to the pre-generated web page so that a random string of characters is created.
- Tools/languages used: Javascript/jQuery
